Augmented Reality Viewer
&
"Nearby Search" Feature

NYPD

Important Notes

For technical assistance [redacted]

- Augmented Reality technology digitally integrates information already stored on a member of the service's smart phone with their physical environment in real time.
- Uniformed members of the service are reminded to maintain situational awareness at all times and limit the use of Department smartphones in the absence of another uniformed member of the service who can provide proper tactical cover.
- Users have the option to scan their surroundings without pointing their department phone at a specific location.
- Users can hold their phones in a normal manner and the feature will still provide them with all corresponding data.
- The map at the bottom of the screen will orient the user regarding their location.
- The Augmented Reality feature does not use facial recognition or artificial intelligence.
- Refer to Operations Order # 30 of 2023 for procedure.

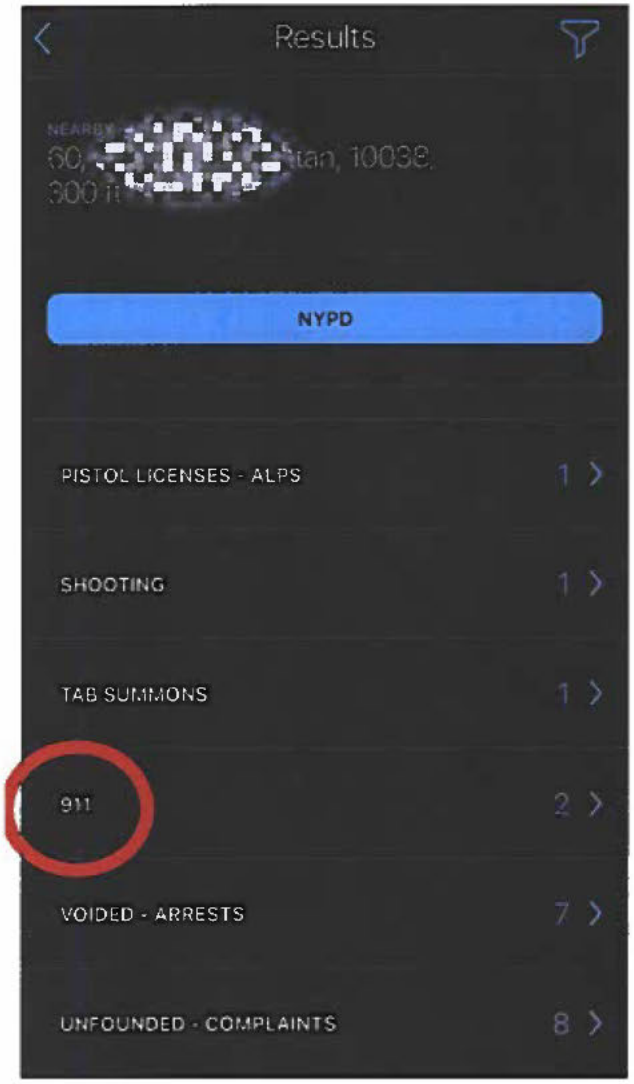
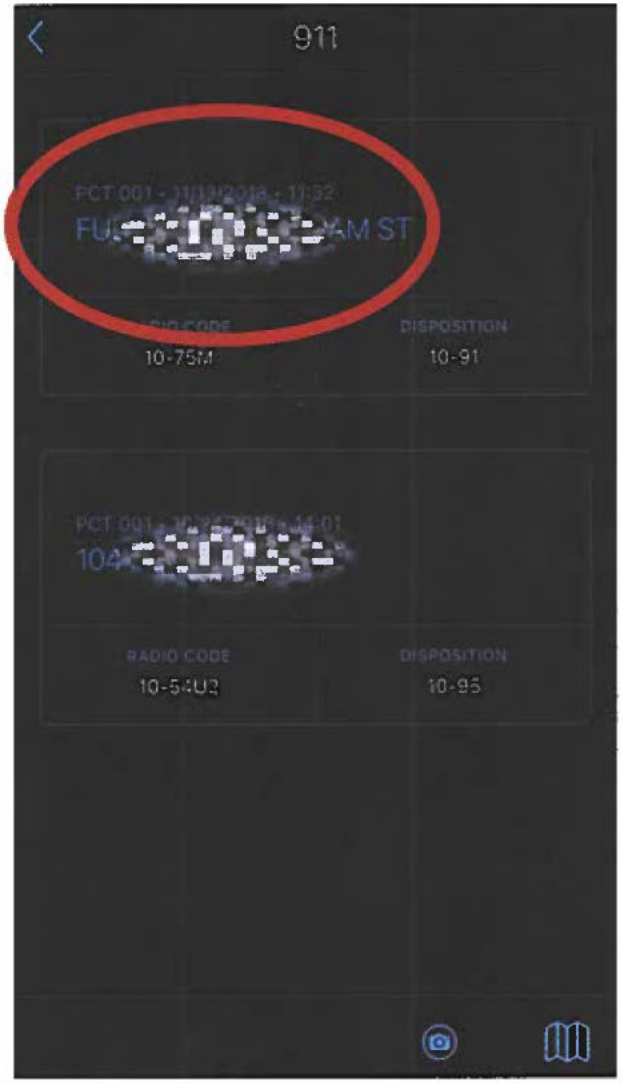
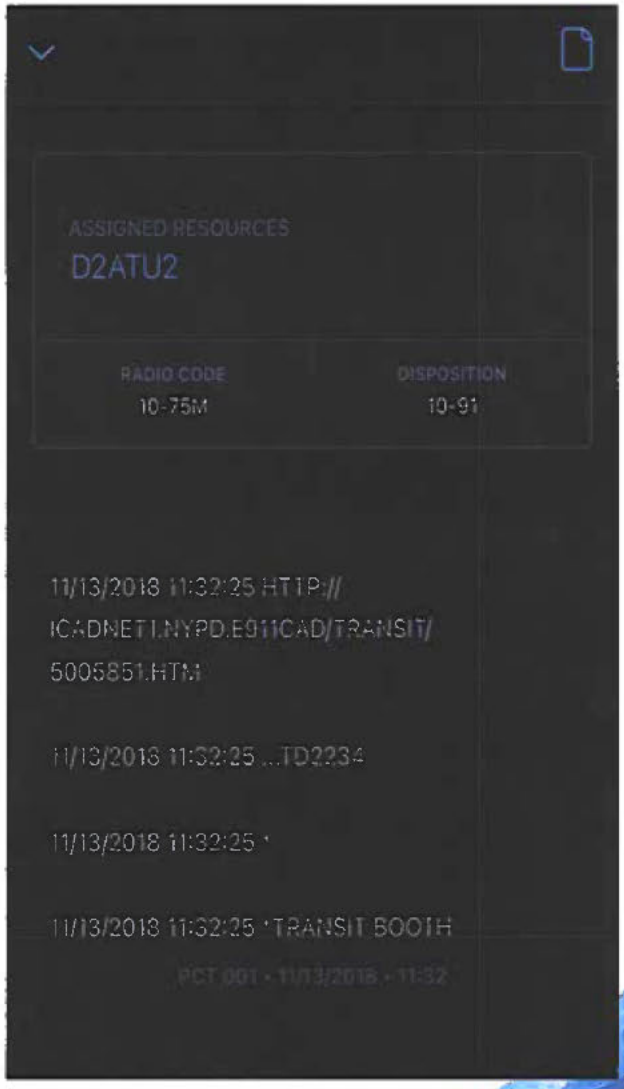
[redacted]







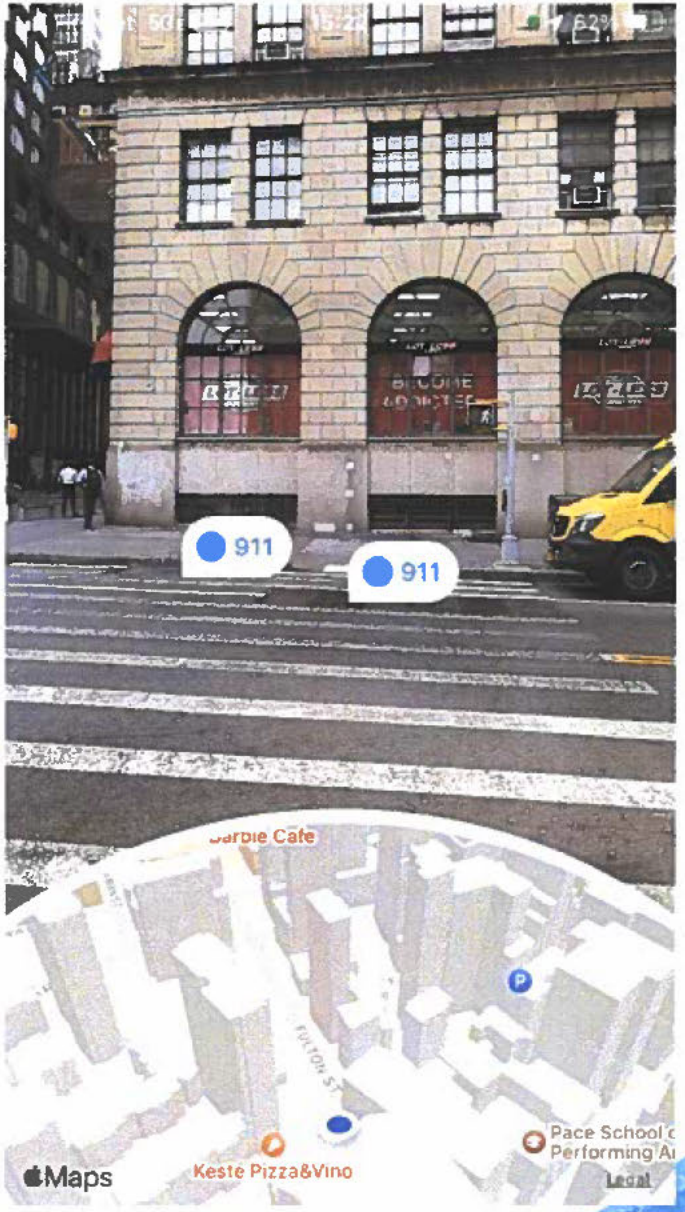
Users can select the specific data sources that they would like to see.

** Law Enforcement Sensitive **

User Guide

To access the Augmented Reality viewer, users can tap on the camera icon at the bottom of the screen.

The camera display will augment and display geospatial data.

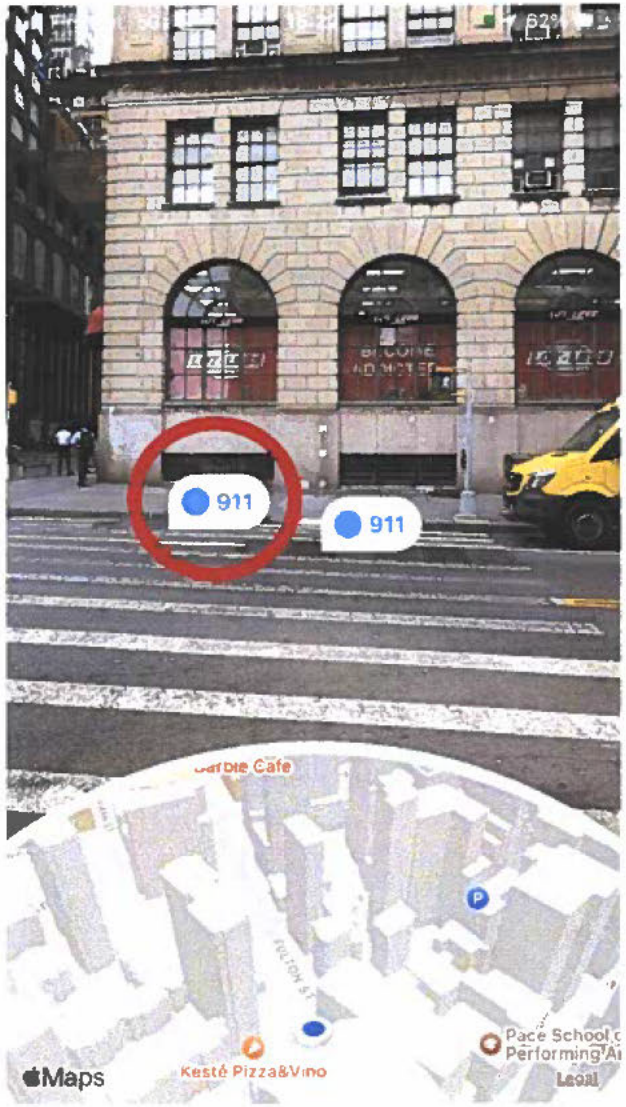


** Law Enforcement Sensitive **

User Guide

Users can scan their location by moving their Department smart phone in different directions.

If the location corresponds to Department data, that data will appear in the form of a "Call Out" bubble.



Users can select the data they want to view by tapping on the bubble.
